DeepSeek AI Tips XRP, PEPE, SHIB for Explosive Gains

August 6, 2025

– Categories: *Crypto*

With momentum building across the crypto market, DeepSeek AI has released a bold prediction: XRP, Pepe (PEPE), and Shiba Inu (SHIB) could all see massive growth before the end of 2025. This comes on the heels of Bitcoin's all-time high (ATH) of \$122,838 last month and major regulatory developments out of Washington.

The U.S. Securities and Exchange Commission (SEC) recently launched **Project Crypto**, aimed at updating financial laws to better reflect today's digital asset landscape. SEC Chairman Paul S. Atkins described the initiative as a critical step toward making the United

States a global leader in cryptocurrency innovation, a cornerstone of President Donald Trump's economic agenda.

XRP: New Highs Within Reach

According to DeepSeek AI, **XRP (Ripple's native token)** could climb to \$5 or more before the year wraps up. It's currently trading around \$3.08, following a July high of \$3.65. That would mark a 63% increase, with some projections suggesting even more upside.

XRP's appeal lies in its real-world utility. The **United Nations Capital Development Fund (UNCDF)** endorsed XRP for cross-border payments in 2024, citing its speed, low fees, and efficiency. Regulatory clarity has also boosted confidence. After a 2023 U.S. court decision and the SEC's case closure in early 2025, XRP is no longer under legal uncertainty.

Technically, XRP appears primed for another breakout. The **Relative Strength Index (RSI)** has cooled to 49 from an overheated 86, showing potential room for growth as buying interest returns.

PEPE: Meme Coin With Real Muscle

Launched in April 2023, **Pepe (PEPE)** has grown into one of the largest meme tokens, with a \$4.5 billion market cap. DeepSeek AI forecasts a potential rise to \$0.00006 by December, nearly a sixfold increase.

Despite recent volatility, PEPE continues to outperform many competitors. Endorsements, both subtle and not, from high-profile figures like Elon Musk have kept the token in the spotlight. A bullish descending wedge pattern has also formed on its price chart, often a signal of an imminent breakout.

SHIB: Technical and Fundamental Strength

Shiba Inu (SHIB), trading near \$0.00001232, could see 5x growth if it breaks key resistance levels. With a market cap of \$7.3 billion, SHIB is gaining traction beyond its meme coin identity.

The launch of **Shibarium**, a **Layer-2 blockchain** on Ethereum, has added real utility. Meanwhile, aggressive token burns, over 1.3 billion SHIB removed in one week, are tightening supply. The RSI is also trending upward, suggesting growing buying interest.

Final Take

As crypto enters a renewed bull phase, DeepSeek AI's predictions highlight XRP, PEPE, and SHIB as top altcoins to watch. With market sentiment improving and regulatory winds shifting, these assets could deliver standout returns by year-end.
