UK's OPTO Miner Debuts App for Crypto Mining

July 29, 2025

— *Categories: Crypto*

LONDON July 29, 2025 British technology firm OPTO Miner has launched a mobile application aimed at simplifying access to cryptocurrency mining. The platform enables users to manage mining activities directly from a smartphone, without requiring specialized hardware or technical knowledge.

The OPTO Miner app supports multiple digital assets including Bitcoin (BTC), Ethereum (ETH), Ripple (XRP), Litecoin (LTC), Dogecoin (DOGE), and Tether (USDT). The app interface allows users to monitor mining progress, manage contracts, and view earnings in real time.

Founded in 2018 and headquartered in the United Kingdom, OPTO Miner focuses on combining renewable energy sources with blockchain computing. The platform claims to offer environmentally responsible mining services to over 7 million registered users across more than 180 countries. Operational facilities are located in the UK, United States, Canada, United Arab Emirates, and Kazakhstan.

The newly launched app is designed with user accessibility in mind, featuring a layout similar to mainstream financial applications. It includes end-to-end encrypted data transfers and integrates third-party security services such as McAfee and Cloudflare.

To encourage user engagement, the platform offers introductory benefits such as computing power credits and daily usage incentives, as listed on its official site. Contract options range from short-term trials to longer-term plans, with automated daily settlement of mining outputs.

A spokesperson from OPTO Miner said the mobile app is part of the company's strategy to expand participation in blockchain technology and make mining more inclusive. The app allows users to customize asset portfolios and contract settings based on their individual preferences.

The company states it will continue developing technical features and plans to expand support for additional digital currencies and sustainability standards in upcoming updates.

Further information and registration options are available on the OPTO Miner website.
