Paechtown Home Designed for Multigenerational Living

August 5, 2025

– Categories: Real Estate

A thoughtfully designed property in Paechtown, South Australia, offers a compelling example of multigenerational living and functional family design. Originally purchased in 2007, the home was purpose-built to accommodate both younger family members and elderly relatives under one roof.

The existing structure was removed to make way for a new residence, crafted by architect Tim Geue. The resulting home was laid out entirely on one level, except for a wine cellar, to ensure accessibility and ease of movement for residents of all ages.

The house features wide hallways, large bedrooms, and expansive bathrooms, all aimed at providing long-term comfort. The layout has also proven ideal for entertaining, with spacious common areas that can accommodate large gatherings. According to records, the home has hosted events with over 30 guests indoors, without compromising comfort or functionality.

The property also includes a large open-plan kitchen, dining, and living area, designed to create a seamless flow between indoor and outdoor entertaining zones. These spaces offer both practicality and visual appeal, with views of the surrounding landscape and a dam located nearby.

Beyond aesthetics, the dam contributes to the property's natural charm by attracting a wide variety of native birdlife. Its presence enhances the tranquil setting and provides a connection to the local environment, a notable feature for those seeking a semi-rural lifestyle within reach of urban amenities.

Located in the scenic Adelaide Hills region, Paechtown is known for its peaceful surroundings and strong sense of community. Homes in the area are often sought after by buyers looking for space, privacy, and a closer connection to nature.

This Paechtown residence is an example of how intentional design and location can come together to support a comfortable, multigenerational lifestyle, with the added benefit of year-round entertaining capacity.
