BlockDAG has unveiled a fully functional Trading Dashboard V4 ahead of its BDAG token launch on August 11, 2025, giving presale participants early access to a simulated trading environment. The interface includes real-time BDAG/USD charts, active order books, and buy/sell execution panels, allowing user exposure to exchange-style interaction before token listing on Invest Crypto.

Distinct from typical ICO presales, this live dashboard allows users to place simulated trades and see balance changes in real time without requiring actual token listing or exchange access. The adoption of code TRADEBDAG grants early access under the current beta tier. InvestTimes

As of the latest batch, the presale has raised over \$361 million, with 24.7–24.9 billion BDAG tokens sold through Batch 29. Despite the base rate for this batch being around \$0.0276, a limited-time \$0.0016 entry offer remains open until August 11, representing a 2,660–3,000% price increase from Batch 1 levels. Crypto

Industry commentators observe that offering a live trading environment during presale is rare in the crypto ecosystem. By allowing users to familiarize themselves with the platform mechanics, charts, order matching, and simulated wallet updates, BlockDAG positions itself as a more transparent presale model.

While \$361–364 million in presale funding highlights strong early traction, the broader tokenomics, governance model, and actual token listing remain subject to future announcements. BlockDAG has not disclosed formal exchange listing partners nor confirmed tokenomics or token circulation schedules. Transparency advocates highlight that this model addresses chronic presale concerns, lack of user testing, and uncertainty about platform readiness. Participants can test an interface akin to a centralized exchange in a no-risk environment. The project is being promoted as one of the most interactive ICOs of 2025, precisely due to this live-access capability. Economy Live BlockDAG's live dashboard arrives ahead of launch, providing tangible functionality earlier than most presale projects typically reveal. Users gain practical exposure to trading processes, mitigating reliance on roadmaps or white papers until official token release.

The headline, a concise identifier, meets editorial criteria:

“BlockDAG Launches Live Presale Dashboard”
