AWG Crypto has introduced XRP-centric cloud mining contracts, aiming to attract Ripple (XRP) holders and expand participation in the growing XRP ecosystem. The new offering, available through both web and mobile platforms, enables retail investors to remotely mine XRP without the need for physical mining equipment or technical expertise. Users can earn daily rewards in XRP, with the platform also supporting mining for multiple other cryptocurrencies.

The contracts feature full XRP integration, allowing participants to deposit, purchase, mine, and withdraw XRP within the platform. In addition to XRP, users can mine Bitcoin (BTC), Ethereum (ETH), Dogecoin (DOGE), USD Coin (USDC), Tether (USDT), Solana (SOL), Litecoin (LTC), and Bitcoin Cash (BCH). AWG Crypto's proprietary artificial intelligence algorithms allocate mining power to the best-performing assets, aiming to optimize returns while ensuring daily payouts.

AWG Crypto offers a range of contract options to suit different budgets and investment strategies. Examples include a \$12 one-day contract yielding \$0.60, a \$100 two-day contract earning \$3.50 per day, and a \$30,000 55-day contract with a daily return of \$525. According to the company, all contracts return the principal in full upon expiration, reducing risk for participants while maintaining predictable income.

The platform highlights several features it says differentiate its service, including global accessibility, instant setup, and multi-asset flexibility. Users can choose to mine XRP directly or convert earnings into other supported digital assets. Mining operations are conducted entirely online, removing barriers for individuals seeking to participate in cryptocurrency mining without significant upfront investment.

Since 2018, AWG Crypto has operated as a cloud mining provider, claiming to serve millions of users globally. With the addition of XRP mining, the company says it is combining institutional-grade infrastructure with accessibility for retail participants. An AWG Crypto spokesperson stated, "XRP has always been fast, efficient, and scalable. Now, it can also be mined securely, remotely, and profitably. We have removed all barriers so that anyone can participate in the future growth of XRP."

The launch reflects a broader trend of expanding cryptocurrency mining opportunities beyond Bitcoin, offering investors more diversified ways to earn passive income in the digital asset space. While market conditions for cryptocurrencies remain volatile, AWG Crypto promotes its contracts as a way to maintain stable daily income through an AI-managed mining strategy.
