Tsecond Appoints Former U.S. Army CIO Raj Iyer to Lead Public Sector Expansion

July 9, 2025

— Categories: Defence & Security

Tsecond, a fast-growing innovator in artificial intelligence (AI)-powered edge infrastructure, has announced the appointment of Raj Iyer as its new president of public sector markets. This move reflects the company's commitment to helping defense and government agencies modernize how they collect and process critical data, especially in environments where every second counts.

Based in San Jose, California, and Bengaluru, India, Tsecond is known for creating the BRYCK platform, a compact, low-power AI inferencing device designed for demanding edge

environments from military operations to enterprise applications. As defense agencies across the world accelerate investments in AI tools, Tsecond is positioning itself to become a key partner in shaping the future of mission-centric technology.

Iyer brings more than 30 years of experience leading large-scale digital transformations at the intersection of defense, technology, and consulting. Notably, he served as the first Chief Information Officer of the United States Army, where he oversaw one of the largest IT modernization initiatives in federal history. Under his leadership, the Army advanced cybersecurity, improved infrastructure resilience, and enhanced mission readiness on a global scale.

“Today, government agencies are creating more data at the edge than ever before,” Iyer said. “This data offers an incredible opportunity to improve decision-making right at the point of collection. But to truly unlock its value, organizations need solutions that are both powerful and practical in constrained environments.”

At Tsecond, Iyer will focus on expanding the company’s presence in the federal market by growing engineering, marketing, and sales teams. He will also help guide strategy for collaborating with government partners, co-designing solutions, and scaling deployments that can operate in harsh conditions, whether on land, at sea, or in the air.

Sahil Chawla, co-founder and CEO of Tsecond, expressed confidence in Iyer’s ability to drive the company’s next phase of growth. “Raj’s deep understanding of defense and technology challenges will be instrumental as we help governments and defense teams build infrastructure that supports faster, smarter decisions,” Chawla said.

Tsecond’s flagship BRYCK platform has been showcased at Edge Field Day 3 and is being evaluated by organizations including Boeing, Picture Shop, Madison Square Garden Entertainment, and government defense entities in India and the U.S. With Iyer on board, the company aims to accelerate its mission to deliver agile, high-performance AI infrastructure that empowers agencies to protect national interests and better serve citizens around the world.
